# AutoPlant Drive Through Vehicle, Tanker and Train Washing Systems

## Specialist Equipment

For irregular shaped vehicles, tanker wash systems and train washing, Morclean can provide bespoke systems designed around the vehicle fleet.

Incorporating either spray arches, moving arch or brush wash technology, or a combination of both, the systems can also be used in conjunction with a Morclean Water Reclaim Unit. These cost effective systems collect waste water in an Interceptor and then recycle it for later use.

Morclean can now provide its customers with a special washing plant for tanks, trains, and any other type of irregular shaped vehicles. It contains a focused high pressure action, combined with the rotating and approach movement of the nozzles to the vehicle.

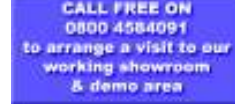

## Cleaning for irregular shapes

Morclean also design and specify all civil works, interceptors, water reclaim and discharge and drainage. Our team of technicians will be pleased to offer all the necessary advice.
