

TANKS & INTERCEPTORS

FORECOURT SEPARATORS

Forecourt separators, as defined by Pollution Prevention Guidelines 3 published by the Environment Agency, are full retention separators specified to retain on site the maximum spillage likely to occur at a petrol filling station. They are required for both safety and environmental reasons and will treat spillages occurring during vehicle refuelling and road tanker delivery.

Forecourt Separators

Used in filling stations where current legislation dictates that all areas, where a fuel tanker makes deliveries, must be able to contain 7600 Ltrs of fuel spillage. These separators are 10,000 Ltrs capacity to allow for occasional spillages prior to an incident

Class 1 Separators are used for connection to a Surface Drain

Class 2 Separators are used for connection to a Foul Drain

Product Overview

1. For high risk applications such as petrol filling station and contaminated industrial areas where it is possible to have a constant stream or major spillage of pollutants

Full flow treatment of rainfall intensity up to 50mm/hr Standard range covers Class 1 and 2 specifications to NS100, but larger models are available

Features:

1. Must have a minimum storage capacity of 7600 litres to contain spillage from a full road tanker compartment
Can be Class 1 or 2 and may not need a coalescing filter if discharging, with water authority agreement, into a foul sewer
An automatic closure and pollutant level monitor are normally required.

This product requires frame(s) and cover(s)

Model/type	Size mm	Duty	European Standard	Loading	Typical Overground
A15	600 x 450	light duty	BSEN 124	3 tonne approx.	cars & small vans
B125	600 x 450	medium duty	BSEN 124	17 tonne approx.	vans & small commercial
D400	600 x 450	heavy duty	BSEN 124	38 tonne approx.	large commercial/HGV
